

6th Grade Science Work for November 23-24, 2020

This is the second week we cover the geologic history of the Earth. So far, students have had a great time learning about Earth's past. Because this is a short week, we will focus on an interesting side project that goes into detail about some of the mass extinctions that have happened through Earth's history. Students will collect data and draw conclusions from it. This activity will require for the students to put on thinking caps in order to solve patterns in the data they collect. Looking forward to it! Have a great holiday!!

What you need to know:

☐ **Vocabulary**

- Fossil Record
- Geological Timescale
- Law of Superposition
- Rock Strata

This week, students are expected to complete the following assignments:

Microsoft Teams:

- ☐ Mass Extinctions in Earth's History (Monday and Tuesday)

Nearpod:

- ☐ Monday Warm-Up
 - CODE: **X8TZL**
- ☐ Tuesday Warm-Up
 - CODE: **HCP29**

Science Quote of the Week: "Geologists have a saying - Rocks Remember"
-Neil Armstrong
